

Jan Tokic

Munich, Germany | jan.tokic@proton.me
jantokic.com | github.com/jantokic | linkedin.com/in/jan-tokic

Profile

Systems-focused software engineer building AI systems and high-throughput data infrastructure. Currently Founding AI Engineer at starc., owning the entire AI side of an AI-native investing platform. Designed event-driven pipelines processing 180M+ records and order systems handling 10M+ orders/month; core contributor to Vendure (8k GitHub stars, used by IBM, Breitling, QVC). Leverages AI-assisted development workflows with Claude Code to ship at exceptional velocity.

Education

B.Sc. Information Systems (Wirtschaftsinformatik), *Technical University of Munich* Munich
Oct 2024 — Present | Grade avg. 2.0 (German scale, 1.0 = best) | Focus: AI/ML, Agentic Systems, Quantitative Analysis
Matura in Computer Science, *Higher Technical College* Wels
Sept 2018 — Jun 2023 | GPA: 4.0 (best-in-class)

Professional Experience

Founding AI Engineer, *starc.* Berlin (Hybrid)
Apr 2026 — Present

- Own the entire AI side of an AI-native investing platform (NextGen Wealth Labs) — architecture, agentic pipelines, and LLM infrastructure from zero to production
- Building proactive insight engines that explain portfolio moves and market events in each user's personal context — before they ask
- RAG and personalization systems over live market data; shipped closed alpha to first users

Go, TypeScript, Python, GCP, Cloudflare, RAG

Software Engineer, *Vendure* Vienna
Apr 2024 — Mar 2026

- Architected order-processing system handling 10M+ orders/month (~EUR 130M annual revenue)
- Boosted performance 45% via async job queues, DB sharding, and caching; cut latency 60%
- Delivered 4-month project in 1.5 months — Nx monorepo, Docker Swarm, 40+ tickets solo
- Core contributor to open-source headless commerce platform trusted by IBM, Breitling, Swile, and QVC

TypeScript, NestJS, Next.js, PostgreSQL, GraphQL, Docker Swarm, Nx

Software Engineer, *Mira* London
Nov 2024 — Aug 2025

- Built high-frequency trading system in Go processing 8,000+ trades/month with 92% success rate and sub-300ms execution latency
- Designed real-time signal processing pipeline with event-driven architecture and WebSocket feeds
- Led remote engineering team of 3; maintained 99.5% system uptime across distributed infrastructure

Go, GCP, WebSockets, Concurrency/Goroutines

Software Engineer, *Copile* London
Sept 2022 — Mar 2024

- Scaled B2B financial trading platform to 2,100 users and EUR 1.2M monthly volume
- Led cross-functional team of 6 (4 engineers, 2 designers)

Python, Node.js, NoSQL, GCP

Skills

Languages: TypeScript, Go, Python, Java | **Infrastructure:** Docker, Kubernetes, GCP, AWS, CI/CD
Data: ClickHouse, PostgreSQL, Kafka, Redis, Vector Search | **Frameworks:** NestJS, Hono, Next.js, GraphQL
Other: AI/LLM Integration (Claude Code), Open-Source Contribution, Technical Leadership

Projects

Klarity (2025 — Present) — Real-time financial data analytics platform — event-driven streaming pipeline processing 180M+ records into ClickHouse; entity resolution and cross-platform signal detection. Solo-built

Synapse (2025) — Semantic search platform that finds the right internal expert instantly. Built full stack in 36 hours at the TUM.AI × Anthropic Hackathon. 2nd place

Richard (2025) — AI research system that finds insights before you ask. Tracks sources, spots patterns, drafts reports. Cuts 8h of manual research to 30 min. 400+ insights in 8 weeks
